Nebulae Network Vision

Our vision comprises several stages:

- *Establishing Robust Data Feeds*
- *Incorporating Flexible Oracle Scripts and Data Sources*
- *Offering Verifiable Random Numbers*
- *Automating processes, Bridges, Off-chain Computations, and more*

In terms of standing out from the competition, we aim to:

- *Lower operational fees*
- *Diversify our Validators/Nodes*
- *Elevate User Experience, making our platform accessible to a wider audience*

Our future roadmap consists of innovative features, setting us apart from our competitors:

- *Introducing Privacy-Preserving Oracles*
- *Integrating AI and Machine Learning, offering services such as Predictive Analytics, Anomaly Detection, and Trend Analysis*
- *Creating a robust storage model by integrating TON Storage, enabling file access on the blockchain*
- *Providing real-time data streaming and a Push Data Model, presenting real-time feeds for smart contracts that need instant reaction to changes*

With these strategies, we aim to enhance the landscape of blockchain oracle services.
